Trend News Agency (13 January 2026)

Aman Bakiyev

In 2025, Turkmenistan consistently advanced its green and sustainable energy agenda, placing strong emphasis on renewable energy development, decarbonization, climate cooperation, and the introduction of modern, environmentally friendly technologies.

Through enhanced dialogue with the European Union, neighboring nations, and pivotal international stakeholders, Turkmenistan has advanced initiatives in renewable and hydrogen energy, methane emission reduction, circular economy practices, and energy efficiency. These efforts further solidify the country's dedication to the global climate agenda.

According to a review prepared by Trend, Turkmenistan's active participation in regional and international climate forums and the launch of concrete green initiatives reflect the country's growing role as a platform for sustainable energy cooperation in Central Asia.
