Duygu Alhan

Natural gas infrastructure project is expected to support growing electricity demand driven by transport, tourism and industry.

Türkiye and the Turkish Republic of Northern Cyprus (TRNC) signed an agreement Friday to develop a 101-kilometer subsea natural gas pipeline that will strengthen Northern Cyprus' energy security, support electricity generation and advance its long-term electrification strategy.

Speaking at the signing ceremony, Bayraktar said the planned pipeline would extend from Anamur on Türkiye's Mediterranean coast to the Teknecik region of Northern Cyprus, comprising 97 kilometers offshore and 4 kilometers onshore.
