Kazinform (5 October 2026)

Nariman Mergalym

Major dredging work has begun at the port of Aktau to improve the reliability of its infrastructure and increase the efficiency of cargo transportation along the Trans-Caspian International Transport Route (TITR), Qazinform News Agency reports, citing Kazakhstans Ministry of Transport.

The project comes amid the continued decline in the level of the Caspian Sea, which is affecting navigation conditions and the operation of the port.
