Military Review Online (August 2021)

Lt. Col. Edward J. Erickson, PhD, U.S. Army, Retired

How do we explain Azerbaijans stunning strategic victory in the fall of 2020 in what has come to be called the 44-Day War, or the Second Nagorno-Karabakh War? Some regional specialists simply observed, The bigger and better equipped Azerbaijani army, backed by Turkey, overwhelmed the smaller and obsolescent Armenian force. Another view is that Turkey sent experienced military advisors to ☀ direct Bakus War Machine. However, the most pervasive and widely held explanation today asserts that the use of Turkish and Israeli drones was such a tactical game changer that an Azerbaijani victory was preordained.

In 2020, the Azerbaijani armed forces successfully conducted a joint operation to seize geographically and politically important parts of the Karabakh region from the Armenian army. The Azerbaijani strategic objective to recover large portions of Armenian occupied territory proved achievable. Moreover, the unfolding Azerbaijani campaign design clearly demonstrated the hallmarks of operational art by effectively balancing ends, ways, and means. Operationally, the Azerbaijani armed forces joint planning, preparation, and combat effectiveness proved decisive compared to that of its Armenian opponent. Azerbaijani success was achieved through an extended period of Turkish military assistance that was a critically important combat multiplier for the Azerbaijanis, but it was also enabled by the acquisition of selected capabilities and capacities chosen by

Azerbaijan. Ultimately, the success of Azerbaijans 2020 campaign in Karabakh was the result of a sustained period of professionalization in its military institutions and complementary acquisition decisions.
