Zamin.uz (3 September 2025)

According to the Republican Center for Aerogeodesy, over the past three years, 96 percent of all land in the country has been included in electronic digital maps. This was reported by the head of the department of the Republican Center for Aerogeodesy, I. Toshtanov.

It was reported that a special aircraft, an aerial camera, and 112 drones were purchased for the effective organization of topographic surveys. In addition, 6 information systems and data centers have been launched in the industry. As a result, cadastral documents were drawn up for 1.2 million hectares of agricultural land in reserve, and 425 thousand hectares of land were allocated to 675 thousand residents and farmers.

Monitoring and inventory work are regularly carried out in the context of regions by categories of the land fund of the republic. In recent years, the effective management and rational use of land resources have reached a new level. As a result, an inventory of all land plots in the country is being carried out in stages.
